

### ALWAYS A FULL POUR!

Our standard spirits pour is a full 2 ounces.

Tasting pours also available.

Please inquire.

## Aperitif

This is where it all starts. Apertifs are the building blocks of any proper drinking session. No need to drive out to Palm Springs or Joshua Tree or hop on Virgin Atlantic and touch down in the south of France. The selection below are perfect to be drank before anything and also supply vital ammunition in the bartender's utility belt.

# Gin

Gin was the spirit of choice that my grandfather hid underneath his bed in New Orleans. I'm not sure what kind of gin that it was, but I know that it was gin. Gin has come a long way from its origins way back in the Middle Ages to now being one of the most en vogue spirits categories in the alcohol drinking world. The below list represents a rounded out, comprehensive selection of gins in a multitude of different styles to be used in an infinite amount of applications.

# Agave & Friends

Maguey (Mah-Gay')—a type of agave—was one of the most cherished plants in ancient Mexican culture. Often used in religious rituals, it was believed to be home to the goddess Mayahuel and was used to make everything from clothing and tools to the sacred beverage pulque (Pool'-Kay). When the Spanish brought alambic pot stills from the Moorish territories with them to the New World, BAM! mezcal, tequila, and sotol were born. NOM stands for Normas Oficial Mexicana and indicates a government assigned serial number to the distillery where these spirits originate.

## Tequila

Much like champagne is a type of wine that must come from Champagne, France, tequila is a type of mezcal that must come from around the town of Tequila. The town of Tequila is within the state of Jalisco and by law, tequila must be made from blue weber agave. Urban legend says that due to the early popularity of tequila, the unregulated proliferation of agave farms and over-harvesting of trees as a heat source has now led to the tequila process switching from wood-fired hearths to cleaner gas-fired ovens. This is why tequila is typically cleaner tasting than other types of mezcal.

Blancos are unaged, Reposados are aged in barrel between two and twelve months, Anejo are aged between one and three years, and anything older are considered Extra Anejo.

# Mezcal

Basically, everything from Mexico distilled from agave is mezcal, though in conventional terms, when the term mezcal is used, it implies smokier, earthier spirits from the state of Oaxaca (there are a few other certified regions scattered in six other states). Modern production of mezcal usually involves baking the heart of the agave plant in wood-fired, earthen ovens, resulting in layers of deep and smokey flavors. These are artisanal, alambic copper-pot distilled spirits made by families that harvest by hand most of these plants in the wild; this is not the stuff preserving worms in Tarantino movies. Some, like the Real Minero spirits, are even distilled in ultra-traditional clay pot-stills, a rare treat even in Mexico.

## Sotol y Raicilla

Sotol, the state drink of Chihuahua, Durango, and Coahuila, is the distilled spirit of the Sotol (aka Desert Spoon) plant, a similarly spikey-looking ex-cousin to the agave family of plants from which mezcal and tequila are produced. Flavor-wise, sotol is a great gateway between tequila and mezcal: a touch earthier and smokier than tequila without being too intense, milder and softer than mezcal with much complexity. Raicilla was traditionally known as the moonshine of Jalisco and produced outside of the constraints and supervision of the law.

# Rum

- When America was still a collection of colonies, Americans drank an average of 3.5 gallons of rum per person per year
- Pirates today drink far less rum and more Mountain Dew and Red Bull.
- Rum is made from molasses. Rhum (with an h) is made from sugar cane juice.

# Bourbon

Bourbon is the pride and joy of our great nation. Read: more American than apple pie. Bourbon must be made anywhere in these United States and by law must be from mostly corn, but can also have rye, barley, and/or (more rarely) wheat blended in. The breakdown as the actual recipe is referred to as the "mash bill". See illustration to the left.

Bourbons with \* are made with recipes utilizing wheat.

## BUFFALO TRACE DISTILLERY - FRANKFORT, KY

Kentucky Colonel Edmund Haynes Taylor, Jr. is not only the founding father of Buffalo Trace Distillery but is also known as the father of the modern Bourbon industry. In the late 1800's, Taylor teamed up with St. Louis whiskey salesman George T. Stagg, instantly making Buffalo Trace the squad to beat in the American whiskey game.

# Rye

Rye whiskey is bourbon's evil mustachioed alternate reality twin. Made from at least 51% rye with the balance being typically corn and barley, rye is often much more intense, fuller flavored, and less sweet. If you like bourbon, but sometimes fantasize about jazz hands and rippling arm muscles, rye may be your thing.

## SAZERAC - FRANKFORT, KY

There once was a liquor from France named Sazerac, that bartenders in New Orleans used in a cocktail. They called the cocktail Sazerac, and it became so beloved that the bar itself eventually came to be known as Sazerac Coffee House. Then along comes Thomas H. Handy and his suitcase full of money. Thomas bought the bar, then founded a liquor company, and named that company Sazerac.

#	NAME	ALCOHOL	\$
J129	Sazerac 6 Year Old Rye	Frankfort, KY 90 proof	14

## MGPI, FKA LDI - LAWRENCEBURG, INDIANA

Rye whiskey is notoriously difficult to distill. Consequently, many small companies actually purchase their rye from an enormous, highly technically proficient facility in Indiana now owned by a company called MGPI. That said, really smart and talented people are able to walk through the lobby of MGPI, fka LDI, and hand select individual barrels that they believe are superior to all the other barrels. The characters of these whiskies, as evidenced by the range of flavors and brands encompassed below, are often nothing short of extraordinary.

## CATOCTIN CREEK - PURCELLVILLE, VA

A tiny independent distillery in Virginia. ERB co-founder Joe C helped bottle one of their first batches many moons ago and was the instrumental matchmaker that helped Catoctin Creek find distribution in California. We are huge fans, and one of the first bars on the West Coast to carry their whiskey and, as you will see later, their gins and ultra-rare malt whisky.

#	NAME	ALCOHOL	\$
J104	Catoctin Creek Single Barrel	80 proof	14

# American Whiskey

What we've got here are the oddballs and the experimental misfits, from Scotch-style malts to white lightning moonshines. Remember, whisk(e)y is basically anything distilled from grain and while Bourbon and Rye styles are fairly well-defined, sometimes the most exciting whiskies come from distilleries whose style is theirs and theirs alone.

American whiskies can be made smoky, as denoted on our menu with an asterisk.

# Single Distillery Scotch

The vast majority of Scotland's whiskies end up in blends like Dewar's or Johnnie Walker. Those brands buy the output from different distilleries or use the distillate from facilities they own then mix it up to suit their own house style. There's absolutely nothing wrong with that. The forthcoming sections, however, are distillate from individual sites, with inimitable characters, like solo voices soaring through, rather than the pleasantly homogenous thrum of a well-trained choir. Most of these are single malts, i.e. entirely from malted barley, but a few are even single grain Scotch whiskies, made from other grains like corn, oats, wheat, and/or unmalted barley.

The following Scotch whiskies are categorized by region.

## SPEYSIDE

Once considered a mere subregion of the Highlands, Speyside is now home to about half of all Scotland's distilleries, including some of the world's most famous producers such as the Macallan and Glenlivet. They typically make for a rich, smooth, opulent, style that is unequaled.

Peat - noun - def: a brown, soil-like material characteristic of boggy, acid ground, consisting of partly decomposed vegetable matter. Peat was historically burned for heat in certain parts of Scotland and is still used to make some whiskies.

## HIGHLAND

Scotland's largest whisky region, the Highlands encompass a huge variety of whisky styles, from light and fruity to powerful and intense. Historically, many Highland whiskies were peated--some quite heavily so. Though peated whisky from the Highlands is now an anomaly, that style is starting to make a comeback.

## CAMPBELTOWN

Campbeltown used to be a booming distillation center with over thirty distilleries, but today only two remain: Springbank and Glen Scotia. Its consideration as a separate Scotch region is mostly a nod to history because it's so fucking small, but Campbeltown's seaside location does impart its whiskies with a certain unique salinity.

## ISLAND

Island is officially categorized as part of the Highland region. That being said, many consider the disparate, separate island distilleries of the Northwestern coast of Scotland their own group. From the lightly peated Highland Park to the whistle-clean Arran to the unapologetically medicinal Talisker, the Islands each have their own distinct style and thus something for everyone.

ISLAY (eye'-luh)

First things first: Islay is an island off the coast of Scotland and an official Scotch-making region. Islay is home to eight distilleries, the majority of which produce Scotches that are famously smokey and peaty in style. They range from the delicate Bunnahabhain to the Octomore series that were crafted to be the smokiest spirits ever. These are whiskies for closeted arsonists and those that love the smell of an open barbecue.

Items denoted with \* in this section are NOT particularly smokey.

PPM = Parts Per Million of smoke. Anything > 50 is REALLY smoky.

## Blended Scotch

Blended Scotch Whisky is usually a mix of at least 60% grain whiskies and the rest malt whiskies from different Scottish distilleries. They tend to be crowd-pleasing and easy-drinking as well as great values in the world of Scotch. Blended Malt Scotch Whiskies are those that use whisky from many different distilleries, but are always 100% malted barley. These tend to be a bit richer and more full-bodied than regular blended Scotches.

## Irish Whiskey

Traditionally, while Scotch is double-distilled and can be peated, Irish whiskey is triple-distilled and unpeated, which means it's typically lighter, cleaner, sleeker, and more precise. Like a Tesla.

## European Whiskey

The mainland of Europe is home to some of the greatest fruit-based liquors in the world; think XO Cognac and Austrian Schnapps. That said, when it comes to whiskies, for some baffling reason most distillers in Europe have yet to crack the code. There are, however, a handful of great ones, the exceptional exceptions, and here are a select few of the exceptional exceptions.

# Japanese Whisky

In 1918, a young Japanese man from a sake-brewing family named Masataka Taketsuru traveled to Glasgow. Once there, he fell deeply in love with the land, Scotch whisky, and a young Scottish lass named Jessica Roberts. Defying society and sobriety, they quietly married, returned to Japan, and brought with them the knowledge of Scotch whisky production.

Upon returning, Taketsuru found himself under the employ of the beverage company Suntory, which directed him to build Yamazaki, Japan's first whisky distillery, in 1923. When his contract expired, Taketsuru-san went out on his own, founding the Nikka Whisky Company and the Yoichi Distillery in 1934.

Best exemplified by Yamazaki and unlike most single malt producers in Scotland, Japan's distilleries typically house a variety of stills in different shapes & sizes and use different distillation techniques, allowing for a wide palette of flavors to blend together. Yoichi, however, was Taketsuru's vision at making something unapologetically Scottish and singular in character. Like a mosquito with dinosaur DNA frozen in sap, it remains a snapshot of Scotch-style distillation 100 years ago, perhaps more "traditional" than many Scotch facilities today. Today, many more independent distilleries have popped up across Japan, including Chichibu, Mars, Kanosuke, Eigashima, Ohishi, and Fukano.

As I type this and glance below at the large selection of ultrapremium and magically high-quality Japanese whiskies, I can think of no whisky producing region that has a brighter future.

## Shochu

Shochu is a single-distilled Japanese spirit with a tradition of over 500 years, produced extensively in the southern island of Kyushu and enjoyed throughout the country. The saccharification process takes place in the presence of koji, an indispensable ingredient in Japanese fermented foods and beverages. The SG Shochu from Shingo Gokan in collaboration with three of Japan's leading shochu producers belongs to an authentic variety of artisanal shochu known in Japanese as honaku shochu, a spirit category which does not permit any additives to the distillate besides water.

## Taiwanese Whisky

The newest contestants on the world stage of Scotch-like whiskies hail from Taiwan, an island better known for manufacturing computer parts than liquor. Taiwan's 25 million inhabitants drink, however, about 3 times the amount of Scotch as Americans per capita, and ever since the privatization of the spirits industry in the past fifteen years, industrious Scotch lovers there have set up shop on their native island to make whiskies that have been sweeping awards across the globe, putting Scottish and Japanese distillers on notice.

## Indian Whisky

The connection between India and Scotch-style whiskies might seem only natural given the historical, colonial entanglements between India and the UK, but in actuality, much of what was made and sold as whisky was predominantly from molasses, rather than grain. It wasn't until 1982, when Scotch enthusiast and heir to the Amrut distillery Neelakanta Jagdale decided to hijack his father's company, that India saw the birth of its first truly excellent malt whisky. Since then, Amrut has firmly established itself amongst Scotch fans the world over as being one of the world's leading single malt whisky-producers. Amrut punches well above its weight class in both flavor and value.

## Korean Whisky

Korea's history of craft Single Malt Whisky starts with Three Societies in Namyangju, just 40 minutes north of Seoul. Three Societies single handedly defines Korean single malt spirits. Named for the three countries represented by its multinational distilling team, the distillery's crest symbolizes each country's national animals: the Korean Tiger, the American Bald Eagle, and the Scottish Unicorn. Drawing inspiration from the great whisk(e)y producers of the world, Three Societies aims to capture and bottle the heart and soul of Korean
